FRONT END DEVELOPMENT EXPERIENCE

- Leveraged three.js, WebRTC, React, and Redux, collaborating with a team of full stack developers and creating up to 1.2K lines of front-end code to reverse engineer a collaborative game with 3D graphics.
 - Developed an illustrative storytelling site outlining Three.js features and specifications, including a virtual 3D tour with 360-degree experience, a CSS-based animate-on-scroll, and a 3D minigame.
 - Completed all steps in three days and attained recognition as the Stackathon winner.
 - Created software utilizing WebGL library to transform diverse digital pictures into 3D images, drawing on skills to incorporate an accompanying snow effect with particles.js for increased engagement.
 - Received an invitation to develop the Fullstack alumni page, establishing an appealing and accessible format using JavaScript, CSS, and HTML and integrating photography to represent student experiences.
 - Manipulated a document object model (DOM), employing object-oriented programming to create a guessing game with user-based hints and a visually appealing CSS gradient.
